## WHAT IS CLAIMED IS:

1. A photothermographic material comprising a support and an image-forming layer disposed on the support, wherein the image-forming layer comprises a photosensitive silver halide, a non-photosensitive organic silver salt, a reducing agent and a binder, and the binder comprises a polymer formed by copolymerization of monomers including 10 to 70% by mass of a monomer represented by the following formula (M):

$$CH_{2} = CR^{01} - CR^{02} = CH_{2}$$

wherein  $R^{01}$  represents a hydrogen atom, an alkyl group having 1 to 6 carbon atoms, a halogen atom, or a cyano group;  $R^{02}$  represents an alkyl group having 1 to 6 carbon atoms, a halogen atom, or a cyano group; and where  $R^{01}$  and  $R^{02}$  are never both simultaneously a hydrogen atom.

- 2. A photothermographic material according to claim 1, wherein the image-forming layer contains an antifoggant formed from an organic polyhalogen compound.
- 3. A photothermographic material according to claim 2, wherein the organic polyhalogen compound is represented by the following formula  $(\mathrm{H})$ :

Formula (H)

$$Q - (Y) n - C(Z_1) (Z_2) X$$

wherein Q represents an alkyl group, an aryl group, or a heterocyclic group; Y represents a divalent linking group; n represents an integer of 0 or 1;  $Z_1$  and  $Z_2$  represent a halogen atom, respectively; and X represents a hydrogen atom or an electron-withdrawing group.

- 4. A photothermographic material according to claim 2, wherein the amount of the antifoggant is 0.01 to 0.5 g/m $^2$ .
- 5. A photothermographic material according to claim 3, wherein the amount of the antifoggant is 0.01 to 0.5  $g/m^2$ .
- 6. A photothermographic material according to claim 1, wherein the polymer has a glass-transition temperature of -30 to  $70\,^{\circ}\text{C}$ .
- 7. A photothermographic material according to claim 2, wherein the polymer has a glass-transition temperature of -30 to  $70\,^{\circ}\text{C}$ .
- 8. A photothermographic material according to claim 3, wherein the polymer has a glass-transition temperature of -30 to  $70\,^{\circ}\text{C}$ .
  - 9. A photothermographic material according to claim 4,

wherein the polymer has a glass-transition temperature of -30 to  $70\,^{\circ}\text{C}$  .

- 10. A photothermographic material according to claim 1, wherein the polymer is a polymer latex synthesized by an emulsion polymerization.
- A photothermographic material according to claim
   wherein the polymer is a polymer latex synthesized by an emulsion polymerization.
- 12. A photothermographic material according to claim 3, wherein the polymer is a polymer latex synthesized by an emulsion polymerization.
- 13. A photothermographic material according to claim 1, wherein  $R^{01}$  is a hydrogen atom and  $R^{02}$  is a methyl group in the formula (M).
- 14. A photothermographic material according to claim 2, wherein  $R^{01}$  is a hydrogen atom and  $R^{02}$  is a methyl group in the formula (M).
- 15. A photothermographic material according to claim 3, wherein  $R^{01}$  is a hydrogen atom and  $R^{02}$  is a methyl group in

the formula (M).

- 16. A photothermographic material according to claim

  1, wherein the polymer is copolymerized with monomers at 1

  to 20% by mass, said monomers having acid groups.
- 17. A photothermographic material according to claim 2, wherein the polymer is copolymerized with monomers at 1 to 20% by mass, said monomers having acid groups.
- 18. A photothermographic material according to claim 3, wherein the polymer is copolymerized with monomers at 1 to 20% by mass, said monomers having acid groups.
